

Helping clients achieve their business objectives on ultra-reliable infrastructure

365 IT

Managed services provider 365 IT is using a Lenovo TruScale Infrastructure as a Service (IaaS) solution to host business-critical systems for its clients. Hosting, management, and support from Lenovo remove the need for 365 IT to handle low-level administration.

Customer Problem

365 IT wanted to refresh its Scale Computing landscape and optimize its costs so that it could focus more closely on innovation for its clients.

Lenovo Solution

With a Lenovo TruScale IaaS solution based on Lenovo SR630 servers, 365 IT has a robust, high-performance private cloud on which to provide services to clients.

Business Impact

Clients benefit from cost-effective, usage-based access to enterprise-class IT infrastructure. 365 IT is released from low-value infrastructure management to focus on delivering value to clients.

“With TruScale, Lenovo provides the computing infrastructure to us as a service so that we can focus all our attention on innovating for our clients and supporting their business development.”
