

# Satisfying growing appetites for delicious goods

## Inalca

To achieve rapid business growth while keeping back-office operations running smoothly, meat producer Inalca moved its IT infrastructure to two new data centers built with Lenovo ThinkSystem servers, powered by 3rd Gen Intel® Xeon® Scalable processors—enabling timely deliveries to delight customers.

### Customer Problem

How could international food manufacturer Inalca keep its factories running 24/7 while scaling to meet surging customer demand?

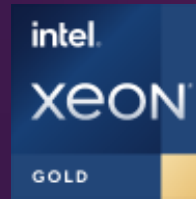

### Lenovo Solution

Working with Versya, Inalca built two new data centers equipped with Lenovo ThinkSystem SR650 V2 servers, powered by 3rd Gen Intel® Xeon® Scalable processors.

### Business Impact

Providing rock-solid reliability, high performance, and simplified system management, the new infrastructure helps Inalca drive growth while delivering excellent customer service.

Powered by

“Refreshing our IT infrastructure with Lenovo and Versya has practically eliminated the risk of disruption to our manufacturing, processing, and distribution operations.”
