Empowering healthcare providers with rapid, reliable access to medical images.

Prism Medical

Solution components Hardware

- Lenovo ThinkSystem SR250
- Lenovo ThinkSystem SR550

Software

- Lenovo XClarity Administrator

Prism Medical previously relied on platforms from multiple hardware vendors to run picture archiving and communication systems (PACS) for healthcare customers—sending costs and administrative effort soaring. Now, it's partnered with service provider Metric to consolidate on Lenovo ThinkSystem servers as its strategic hardware platform. The new approach has streamlined procurement, deployment, and support, all while providing a rock-solid platform for running mission-critical medical imaging systems.

“

“If the Prism PACS solution were to stop working, our customers would not be able to use X-rays or MRIs at all, and their operations would come to a halt. The underlying system must be extremely stable and robust as a result, and Lenovo's servers are very reliable in this respect.”

Mr. Katsumi Kudo,
President and Representative
Director, Prism Medical
