- Lenovo Post Warranty Services
- Lenovo Proof of Concept Lab
- Lenovo Training Services

To sharpen its competitive edge and accelerate drug research, Wuhan Qirui Pharmaceutical Co., Ltd. (hereafter referred to as QR Pharmaceuticals) aimed to replace siloed business processes and systems with a single, integrated platform for research and strategic decision-making. To lay the foundation for the new capabilities, QR Pharmaceuticals replaced a heterogeneous three-tier IT architecture with a hyperconverged infrastructure from Nutanix and Lenovo. With Lenovo ThinkAgile HX 3000 and HX 5000 Series appliances, the company has integrated its operations, increased application performance by 200% on average, cut operational costs, and enabled big-data analytics.

“By embracing a hyperconverged infrastructure from Lenovo and Nutanix, we’ve demolished the barriers to digital transformation. Looking ahead, we plan to use the platform to build next-generation big-data analytics technologies—empowering QR Pharmaceuticals to develop innovative treatments that benefit the whole world.”

Gao Yang,
Director of Information Department, QR Pharmaceuticals
