

Creating TV and movie magic with Lenovo

TAT Productions

A production company and digital studio based in France is using Lenovo ThinkSystem servers to bring animated stories to life on TV and cinema screens worldwide.

Customer Problem

To design, model, light, and render its TV and cinema content, TAT uses huge amounts of computational power and is always working against the clock.

Lenovo Solution

TAT deployed a new render farm comprising 40 Lenovo ThinkSystem SD630 V2 compute nodes, each with two 16-core processors and 512 GB of memory, managed with Lenovo XClarity.

Business Impact

TAT powers through heavy computation and simulation workloads, creating digital content that brings joy to millions worldwide—without IT management complexity.

“What makes the difference in favor of Lenovo is XClarity—compared to tools from other vendors, the difference is night and day.”

Boualem Nouri

IT Manager, TAT Productions

80% time saving in server updates

Centralized configuration

Exceptional reliability
